ACO SuDS Overflow Gullies

The ACO SuDS Overflow Gully range is a quick and easy method for setting the overflow height within your SuDS installation.

ACO's SuDS Overflow Gullies can be utilised in rain gardens and bioretention areas to protect overflow pipes from debris ingress and from accidental damage to the exposed pipe. Two options are available; a ductile iron gully for larger SuDS installations and an ABS plastic gully for smaller areas. Both feature wide inlet areas minimising blockages, and their black finish will discreetly blend into the surrounding flora.

Benefits

- Accurate setting of overflow height
- Restricts leaf and debris entry
- Inconspicuous aesthetic
- Quick and easy installation

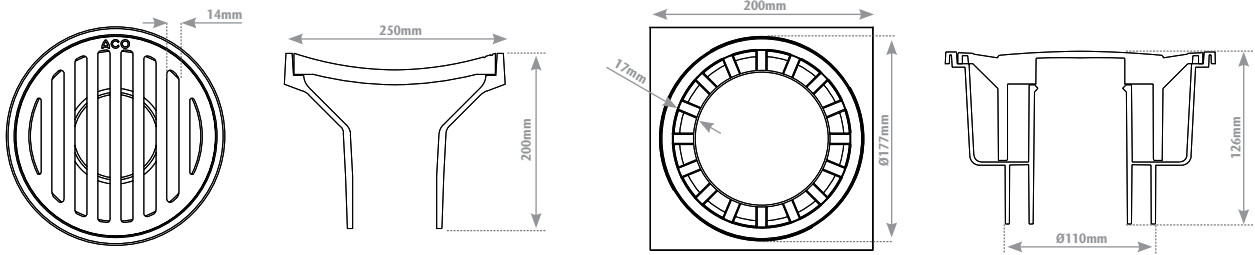

ACO SuDS Overflow Gullies

Applications

- Overflows in rain gardens and bioretention areas

System Overview

SuDS Overflow Gully ductile iron

SuDS Overflow Gully black ABS plastic

Product Code	Description	Width mm	Length mm	Height mm	Weight kg
ACO SuDS Overflow Gully					
25191	SuDS Overflow Gully ductile iron	250	250	200	10
310094	SuDS Overflow Gully black ABS plastic	200	200	126	1.5

Installation with rain gardens/bioretention areas

The overflow height is selected based on the SuDS features infiltration rates and water storage requirements. Setting the overflow higher than ground level creates a freeboard area for temporary water storage during storm events.

The ductile iron version has internal diameter 100mm, connectible to 110mm connector pipe. The plastic version can be connected to either 75mm or 110mm pipe.

Installation guidance based on CIRIA SuDS Manual C753, for illustration purposes only. Detailed installation statements and methodologies will vary for all sites as each will have different aspects deserving particular consideration, consequently the relevant approvals should be sought from the consulting engineer and/or the installer.
