PRODUCT, SUPPLY AND
SERVICE INFORMATION

ACO MultiDrain® Brickslot

ACO is proud to introduce a dedicated Brickslot brochure featuring our full range of discreet brickslot gratings, including our new bespoke options.

ACO MultiDrain® Brickslot grates are compatible with the full range of ACO MultiDrain® channels with some additional benefits:

- Easier alignment and an improved straightness of the channel run with a new larger connector design
- Easier installation with a new folded edge on the side of the grate prevents mortar or sand from entering the channel during groundworks
- Brickslot is protected during installation from silt and dirt as the product comes with a protective cover
- The frame is made with a more sustainable and efficient technology of clinching, the press joining of sheet metal without any additional material, instead of welding (M100D/DS single versions)
- Fully tested according to BS EN 1433:2002

Range details and compatibility

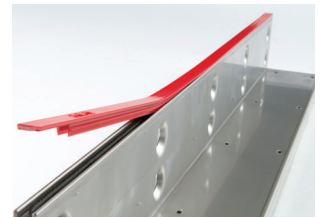

The ACO MultiDrain® Brickslot range is available in galvanised and stainless steel, in a wide range of upstand heights and styles.

Brickslot is suitable for ACO MultiDrain® MD, ACO MultiDrain® PPD and ACO Multiline Sealin drainage systems in 1m and 0.5m options as well as access units.

Safer and improved installation

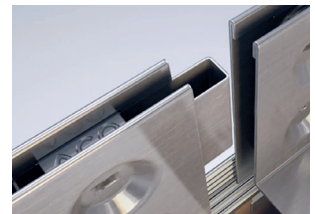

Protective cover

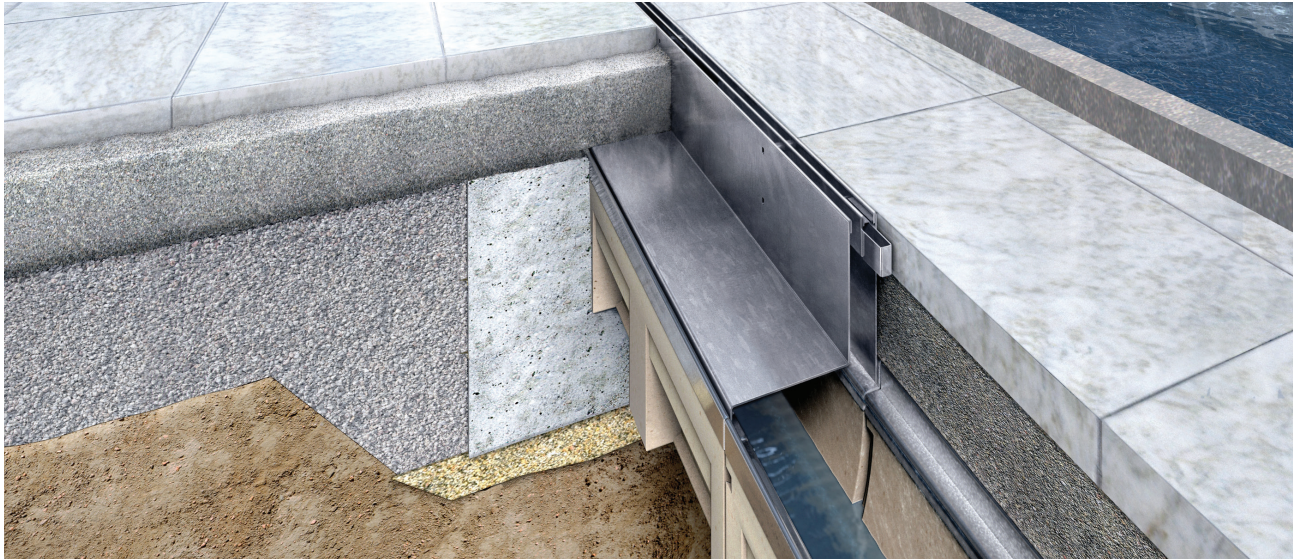

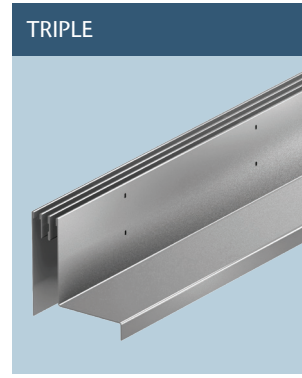

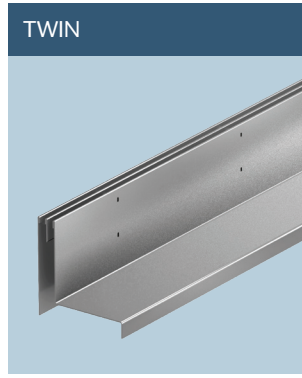

The red protective cover is delivered already installed on grates and access units. The channel is installed while the protective cover is still covering the slot. Once the finished surface is laid, the protective cover can be removed. No sand or dirt enters the channel, and scratches on the slot from installation are minimised.

Folded edge and new connector

The new larger connector design allows easier alignment and an improved straightness of the channel run. The folded edge on the side of the grate prevents mortar or sand from entering the channel during groundworks.
